WEBSITE IMPROVEMENT PROPOSAL

Lessons from Marazzi USA for Cabinetdealz

Prepared by: Cabinetdealz

Prepared for: Tom, Owner — Cabinetdealz (cabinetdealz.com)

Date: November 5, 2026

Classification: Internal strategy proposal | Scope: Marketing site & affiliate experience

---

1. Executive Summary

This proposal adapts patterns observed on marazziusa.com—a tile supplier, not a competitor—to Cabinetdealz's B2B/B2C cabinet trade platform. The audience for this document is Tom, owner of Cabinetdealz. The platform serves affiliate dealer sites, contractors, and distributors (including Clark and Son, Ashford, US Cabinet Depot, and WalzCraft), and already operates a 3D kitchen designer / auto-designer, approved door renders, and CRM for affiliates.

Marazzi's public site emphasizes look-based browsing, lifestyle imagery on product pages, an in-room visualizer ("Stylizer" via "View in a Room"), sample requests, an authorized-dealer / store locator, structured product specifications with downloadable sheets, an Inspiration Gallery, and account Favorites. Mapping those patterns onto Cabinetdealz assets creates a clearer path: style discovery → room visualization → sample/lead → local dealer or affiliate conversion.

Each recommendation below states what Marazzi does (verified), how to apply it on concrete Cabinetdealz pages/components, why it helps (sales, leads, affiliates), effort (S/M/L), and priority. No conversion metrics or invented performance claims are included. Phase 1 focuses on Shop-by-Look and room photos—the highest-leverage merchandising changes—alongside foundational specs and filters.

2. Context, Audience & Verified Sources

Cabinetdealz is not being asked to imitate a tile brand's catalog. The intent is selective transfer of merchandising and lead UX that fits cabinets: style-first landing, lifestyle-first product pages, visualizer entry points, sample-as-lead, dealer discovery, and trade-ready specs—while leaning on Cabinetdealz's existing designer, renders, and affiliate CRM.

Pages reviewed via public fetch/search for this proposal: marazziusa.com (home "Products by Look"); /looks (Browse by Look categories including Wood, Marble, Stone, Encaustic, Concrete, Fabric, Metallic, Mosaic, Natural Stone); /stylizer ("View in a Room," room select/upload, filters, save/share); /samples (showroom/design-studio samples and architect/designer sample path); /inspiration-gallery (residential/commercial scenes and products-used framing); /favorites (account-gated saved items); /dealerlocations and /store-locator (plus locations.marazziusa.com); and product detail pages such as Persuade – Beige (room hero imagery, attribute blocks, application/durability/technical tables). Collection sales/spec PDFs are published under digitalassets.daltile.com for Marazzi. Only these observed patterns are cited.

3. Recommendations

3.1 Shop-by-Look Landing Pages

What Marazzi does: The home page leads with “Products by Look,” and /looks lists look categories (Wood, Marble, Stone, Encaustic, Concrete, Fabric, Metallic, Mosaic, Natural Stone). Shoppers browse aesthetic families before SKUs.

Apply on Cabinetdealz: Add style tags on door styles (examples: Shaker, Slab, Raised Panel, Beadboard, Transitional, Contemporary, Farmhouse, Traditional). Build landing pages at /looks/{tag}; feature them on the homepage and main navigation. Each page lists tagged doors with a lifestyle hero, short copy, and CTAs into the catalog and 3D designer. Affiliate dealer sites should inherit the same tag taxonomy for consistent storefronts.

Why it helps: Lowers cognitive load for B2C remodelers; gives contractors and affiliates a style-first sales conversation instead of a raw SKU list—supporting browse-to-configure and cleaner affiliate leads.

Effort: M | Priority: High (Phase 1)

3.2 Room / Lifestyle Photos Leading Product Pages

What Marazzi does: Product pages open with installed/room photography (e.g., Persuade – Beige leads with a residential scene). The Inspiration Gallery groups residential and commercial room scenes and surfaces products used.

Apply on Cabinetdealz: Lead every door/product page with a kitchen room hero generated from approved door renders composited in the 3D designer. Use a small set of standardized scene templates (e.g., light / medium / dark kitchens). Keep flat swatch/render images as secondary gallery items. Optionally seed an Inspiration Gallery of curated kitchen scenes that deep-link to the doors used.

Why it helps: Buyers evaluate finished kitchens, not door chips alone. Lifestyle-first PDPs support engagement and give affiliates a stronger visual sales aid.

Effort: M (render→scene pipeline + templates; L if full editorial gallery) | Priority: High (Phase 1)

3.3 “See It in a Kitchen” → 3D Designer Preload

What Marazzi does: Product pages expose “View in a Room,” which opens the Stylizer. Users choose or upload a room, change surfaces, filter by color/shape/pattern, and save/share designs.

Apply on Cabinetdealz: Add a primary CTA “See it in a kitchen” on door PDPs and look pages that opens the existing 3D kitchen designer / auto-designer with that door style (and selected color) preloaded. Provide shareable design URLs for affiliates and contractors.

Why it helps: Converts browse into configure; creates sticky sessions and shareable affiliate links; shortens the path from interest to quote.

Effort: M | Priority: High

3.4 Sample Door Ordering (Limit ~5) as CRM Leads

What Marazzi does: A dedicated Samples experience offers free samples through showrooms/design studios and a path for architects and designers to request complimentary samples.

Apply on Cabinetdealz: “Order door samples” on PDPs plus a cart-like sample tray capped at ~5 doors per request. Capture name, email, zip, project type, and affiliate/dealer attribution. Each request creates a CRM lead attributed to the referring affiliate site (or the main site if direct). Fulfillment notifies the attributed dealer/distributor when appropriate.

Why it helps: Turns anonymous browsers into attributed leads for affiliates and distributors (Clark and Son, Ashford, US Cabinet Depot, WalzCraft) while qualifying serious buyers.

Effort: M | Priority: High

3.5 Find-a-Dealer Zip Locator

What Marazzi does: Maintains an Authorized Dealer Locator (/dealerlocations) and Store Locator (/store-locator), with location detail pages under locations.marazziusa.com.

Apply on Cabinetdealz: Build /find-a-dealer with zip/radius search across affiliates, contractors, and participating distributors. Result cards show name, distance, phone, affiliate website, and “Request consult.” Enforce territory rules so leads route correctly.

Why it helps: Connects online discovery to local fulfillment and strengthens the affiliate/contractor network value proposition.

Effort: M–L | Priority: Medium–High

3.6 Clean Spec Blocks and Faceted Filters

What Marazzi does: Product pages present structured attributes (color code, thickness, nominal size, finish, shade variation, origin) plus Application, Durability, and Technical Specification tables. Collections publish downloadable sales/spec PDFs.

Apply on Cabinetdealz: Standardize a door/cabinet spec block covering style family, construction, finish/color family, overlay, available widths/heights, price tier, in-stock flag, lead time, and compatible box lines. On catalog/PLP pages, ship faceted filters for color family, style, price tier, in stock, and lead time (plus distributor/line where relevant). Offer downloadable one-page door/spec sheets for trade users.

Why it helps: Contractors and distributors need scannable facts; filters cut time-to-SKU and reduce support burden on affiliates.

Effort: M | Priority: High

3.7 Additional Patterns Verified on Marazzi

Inspiration Gallery

What Marazzi does: /inspiration-gallery presents curated room scenes (residential and commercial segments) with gallery controls and a products-used framing.

Apply: Launch /inspiration with kitchen scenes produced from the 3D designer and approved renders; each scene links to doors and “Open in designer.” Optional affiliate white-label. Why / Effort / Priority: Content and SEO landing surface; Effort L; Priority Medium (Phase 3).

Saved Favorites / Project Boards

What Marazzi does: Navigation includes Favorites (/favorites); saving requires sign-in or account creation so users can return to saved items.

Apply: Account Favorites for doors, plus Project Boards (named sets of doors and designer scenes) shareable with an affiliate or contractor. Shared boards can attach as CRM opportunities. Why / Effort / Priority: Return visits and affiliate collaboration artifact; Effort M; Priority Medium (Phase 2).

Downloadable Spec / Sales Sheets

What Marazzi does: Publishes collection PDFs (sales/spec sheets) with sizes, performance tables, and application notes.

Apply: Auto-generate PDF door/line sheets from the structured spec data in 3.6 for contractor packets and affiliate leave-behinds. Why / Effort / Priority: Trade credibility and offline selling; Effort S–M once the data model is clean; Priority Medium (Phase 3).

4. Phased Rollout

Phase 1 — Foundation (do first): Shop-by-Look landing pages with door style tags; room/lifestyle heroes on product pages from approved door renders + 3D designer templates; structured spec blocks; core faceted filters (color family, style, price tier, in stock, lead time). Exit criteria: tagged catalog, look pages live on main site (and ready for affiliate inheritance), and PDPs leading with kitchen heroes rather than swatches alone.

Phase 2 — Conversion: "See it in a kitchen" CTA with designer preload and shareable URLs; sample door ordering (limit ~5) wired to CRM with affiliate attribution; Favorites / Project Boards. Exit criteria: sample requests appear as attributed CRM leads; designer opens preloaded from PDP.

Phase 3 — Network & content: Find-a-dealer zip locator with territory-aware routing; Inspiration Gallery; downloadable spec/sales sheets; affiliate white-label of look pages and gallery where needed. Exit criteria: zip search returns affiliates/contractors/distributors correctly; trade PDFs generate from the same spec model.

5. Summary Table

Recommendation	Key Cabinetdealz Surface	Effort	Priority	Phase
Shop-by-Look pages	Homepage, /looks/{tag}, door tags	M	High	1
Room/lifestyle PDP heroes	Door PDPs; render→3D pipeline	M	High	1
Spec blocks + faceted filters	PDP spec; catalog filters	M	High	1
"See it in a kitchen" CTA	PDP → 3D designer preload	M	High	2
Sample doors (~5) as CRM leads	Sample tray; affiliate CRM	M	High	2
Favorites / Project Boards	Account; share with affiliate	M	Medium	2
Find-a-dealer zip locator	/find-a-dealer; territories	M–L	Med–High	3
Inspiration Gallery	/inspiration; scene→doors	L	Medium	3
Downloadable spec sheets	PDF from structured specs	S–M	Medium	3

Note: Marazzi is referenced solely as a UX/merchandising benchmark in an adjacent finishes category. No partnership, competitive claim, or performance metric is implied. Implementation should be validated against Cabinetdealz platform constraints, affiliate agreements, and distributor policies.
